

SafePac-STRONG

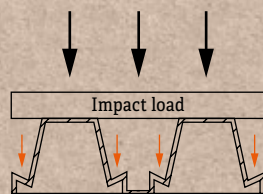

SafePac-STRONG cushions can be used universally as edge protection, round, transport and filler cushions.

SafePac-STRONG

These molded fiber products are universally usable protective cushions made of 100 % recovered paper that are characterised by a patented damping mechanism and thus high elasticity. The damping elements of SafePac-STRONG intercept pressure and impacts and thus prevent damage to the product.

Damping mechanism

The drawing shows how the load is absorbed by the special design of the pyramid-shaped humps. A spring effect is produced that enables the humps to return to their original shape after removal of the load.

Benefits

- easy handling
- easy to tear and cut (resulting in maximum flexibility)
- space saving from nestability
- environmentally friendly and easy disposal
- manufactured from 100 % recovered paper
- patented spring effect and best possible impact absorption

Product overview

Product no.	Dimensions L x W x H mm	Piece / pallet	Height / pallet mm
1833001	780 x 380 x 25	500	2,200
